

MEDEL-H

19 October 1951

Mr. Robert B. Austin
Head, Circulation & Book Custody Section
Army Medical Library
Washington 25, D.C.

Dear Bob:

Our Medical School Catalogs and related documents have been wrapped in 273 packages. These are of the size suitable to be piled in our storage room between the tops of the book shelves and the ceiling. Each package is numbered and we have a record of the contents.

Enclosed is a carbon copy of the 180 pages on which our part-time assistants have recorded this material. We are keeping the ribbon copy in this building, with a notation of the contents of each package. We are keeping a carbon copy, similarly marked as to contents of packages, in the storage room. I am sending you the third, not marked as to contents of packages.. We could not see that the list would be of any more service to you if so marked than it would be otherwise.

I presume that from time to time you may have additions to make to this collection. We shall be glad to record those on a supplementary list. It does not seem at this time that it would be worth-while to incorporate the additions into the main list and into the packages.

I hope to see you next week at the time of the Consultants meeting and to talk over with you a few of the last details about the intended transfer of additional monographs to Cleveland.

Sincerely yours,

WILLIAM J. ROME WILSON
Chief, History of Medicine Division

Charter of Pennsylvania College of Gettysburg, 1854

A statement of the facts connected with the late re-organization of the faculty
of the Medical Department of Pennsylvania College, together with a
documentary history of said department to the present. 1855

The first part of the paper is devoted to a general discussion of the problem. It is shown that the problem is equivalent to a problem in the theory of differential equations. The second part of the paper is devoted to a detailed study of the problem. It is shown that the problem is solvable if and only if certain conditions are satisfied. The third part of the paper is devoted to a study of the properties of the solutions of the problem. It is shown that the solutions are unique and that they depend continuously on the data of the problem.

1. The first step in the process of the scientific method is to make an observation or ask a question.

2. Next, you make a hypothesis.

3. Then, you test your hypothesis.

4. After testing, you analyze the data.

5. Finally, you draw a conclusion.

6. The scientific method is a systematic way of investigating the natural world.

7. It involves making observations and asking questions.

8. The next step is to make a hypothesis.

9. Then, you test your hypothesis.

10. After testing, you analyze the data.

11. Finally, you draw a conclusion.

12. The scientific method is a systematic way of investigating the natural world.

13. It involves making observations and asking questions.

14. The next step is to make a hypothesis.

15. Then, you test your hypothesis.

16. After testing, you analyze the data.

17. Finally, you draw a conclusion.

18. The scientific method is a systematic way of investigating the natural world.

19. It involves making observations and asking questions.
